Greater energy efficiency is guaranteed by the intelligent supplementary module IP Control that controls the power supply for the tubes. It also keeps the degree of impact during the lifespan of the tubes consistently optimal at the EU recommended level of 0,3 Watt/m<sup>2</sup> and for UV-type III. If national regulations authorize, the tubes can be programmed on a higher level of output as well. IP Control is able to reach energy savings of 25% and increases the lifespan of the tubes.
